JAYKING

WEB3 COMMUNITY MANAGER • CONTENT STRATEGIST • SPACES HOST

Builder-backed community operator | Telegram | Launches | Member Experience

PROFILE

Web3 community manager, builder and content strategist with hands-on experience managing Sugarverse and Robusinpe (Gaming). I combine product understanding with clear communication - supporting Telegram launches, member conversations, content and feedback without sounding like a scripted brand account. Because I also build, I can explain technical updates simply and carry real community context back to the team.

COMMUNITY EXPERIENCE

SUGARVERSE / COMMUNITY MANAGER + BUILDER

- Managed day-to-day community communication and launch activity, keeping members informed, engaged and connected to what the project was building.
- Supported Telegram announcements, questions, engagement and community feedback around product updates and launch moments.
- Worked across builder and content responsibilities, so community communication carried real product context rather than generic marketing.

ROBUSINPE (GAMING) / COMMUNITY MANAGER + BUILDER

- Managed a gaming-focused Web3 community with hands-on attention to member interaction, communication quality and launch momentum.
- Coordinated Telegram updates and engagement touchpoints around project progress, while helping members understand what was changing and why.
- Bridged builders and users by turning product details into simple explanations and bringing community responses back into execution.

HOW I RUN COMMUNITY

01 LISTEN

Questions, sentiment, friction

02 EXPLAIN

Clear product & launch updates

03 ENGAGE

Conversations, content, Spaces

04 LOOP BACK

Useful feedback to builders

ENGAGEMENT PROOF

Solana Summit Germany - Superteam DE

10.9K views / 190 replies

Selected public X content performance - shown as audience engagement proof, not community-growth metrics.

COMMUNITY ADVANTAGE

I can sit between product, content and community: understand the build, shape the message, host the conversation, answer with context and keep the feedback loop moving. That makes me useful before, during and after a Web3 launch.
