EDITORIAL STRENGTHS

- Ecosystem deep dives
- Research-led storytelling
- Technical explainers
- Project spotlights
- Long-form articles
- X thread narratives
- Content strategy
- Spaces hosting

BUILDER CONTEXT

- Solana · Anchor
- Sui · Walrus
- Celo · EVM · Hardhat
- TypeScript · JavaScript
- Rust · Python · Solidity
- Next.js · React · Node.js
- Git/GitHub · Cursor · Vercel

RECOGNITION

- 3× hackathon winner
- Invited by Superteam UK leadership to Somerset House, London, following a Colosseum hackathon submission.

JAYKING

WEB3 CONTENT WRITER · TECHNICAL RESEARCHER · ECOSYSTEM STORYTELLER

Developer-background writer | X Thread Writer | Spaces Host

PROFILE

Web3 writer and builder who turns protocols, ecosystem movements and technical products into clear, research-led stories. My writing combines firsthand builder context with narrative structure, making complex ideas useful to both technical and non-technical readers. Selected threads span event reporting, ecosystem research and market explainers across Solana, Stellar and broader Web3.

HACKATHON WINS

SELECTED WRITING

Solana Summit Germany · Superteam DE

24.1K views · 338 likes · 10-chapter event story

Stellar Vietnam Pipeline · @VN_Stellar

13.2K views · 293 likes · 162 replies · research thread

Inside the \$200K Headline · PropXBT

10.9K views · 236 likes · 190 replies · technical/market explainer

WEB3 WRITING + BUILDER EXPERIENCE

- Research and write multi-part Web3 narratives that move beyond surface-level hype into context, mechanics and ecosystem meaning.
- Translate technical architecture, product flows and protocol concepts into clear language for builders, communities and new users.
- Contributed across build and launch execution for Sugarverse, Planck Network, Orvion Browser and Robusinpe (Gaming), giving editorial work direct product context.
- Host Web3 Spaces and communicate project ideas live, connecting technical detail with community-facing storytelling.

EDUCATION + HACKATHONS

Mathematics — advanced coursework in Differential Geometry, Real Analysis, Topology, Tensor Calculus, Number Theory and Mathematical Modeling.

Colosseum (Jun 2026) · Hack4Freedom (May 2026) · Ranger's Build-A-Bear (Mar 2026) · Spark Hackathon #1 (Feb 2026)

SELECTED WRITING / PROOF OF WORK

Research-led Web3 storytelling with builder-level context.

Three pieces I would lead with for a Web3 editorial role. Each shows a different writing mode: event narrative, ecosystem research, and explanatory analysis.

01 Solana Summit Germany · Superteam DE

24.1K views · 338 likes · 10-chapter event story

A chaptered event narrative that turns a summit into a readable ecosystem story — people, builder energy, themes and takeaways — rather than a simple recap.

02 Stellar Vietnam Pipeline · @VN_Stellar

13.2K views · 293 likes · 162 replies

A research thread mapping how universities can feed builders into hackathons, funding and long-term ecosystem participation. Structured around a clear pipeline rather than disconnected facts.

03 Inside the \$200K Headline · PropXBT

10.9K views · 236 likes · 190 replies

An explainer built to unpack what sits behind a headline. The focus is mechanics, context and reader understanding — not hype or recycled claims.

HOW I APPROACH WEB3 EDITORIAL WORK

RESEARCH FIRST

- Start from primary project context, technical docs and ecosystem signals.
- Find the useful angle before writing the hook.
- Separate explanation from promotion so the reader can trust the piece.

BUILDER-LEVEL CLARITY

- Use hands-on development knowledge to understand how products actually work.
- Turn architecture and jargon into narrative without flattening the technical meaning.
- Write for distribution across X, Medium and live community formats such as Spaces.

TECHNICAL FOUNDATION

TypeScript · JavaScript · Rust · Python · Solidity · Next.js · React · Node.js · Tailwind CSS | Solana (Anchor) · Sui (Walrus) · Celo · GOAT Network · Hardhat · EVM compatibility · Web3 AI agent architecture | Git/GitHub · Cursor AI · Vercel
