**3x** BUILDER PROFILE  
HACKATHON  
WINNER

EVM / SVM / MOVE

PRODUCT + GTM

CODE + CONTENT

SPACES + MOTION

## CORE STACK

## LANGUAGES &amp; FRAMEWORKS

TypeScript • JavaScript • Rust • Python  
• Solidity • Next.js • React • Node.js •  
Tailwind CSS

## WEB3 &amp; SMART CONTRACTS

Solana (Anchor) • Sui (Walrus) • Celo •  
GOAT Network • Hardhat • EVM  
compatibility • Web3 AI agent  
architecture

## TOOLS &amp; ENVIRONMENTS

Git/GitHub • Cursor AI • Vercel

## JAYKING •

Web3 Builder • Protocol & Product Developer • Content Strategist • Spaces  
Host • Motion Designer

## PROFILE

Multidisciplinary Web3 builder working across protocol architecture, smart contracts, frontend product, technical storytelling and community-led launch. Comfortable taking an idea from architecture and deployment through interface, brand, motion and go-to-market - with hands-on experience across Solana/SVM, Sui/Move and EVM environments.

## SELECTED WEB3 WORK

Cross-functional builder across Sugarverse, Planck Network, Orvion Browser and Robusinpe (Gaming), contributing beyond a single job title across product, development, content, community, Spaces and launch creative.

## Sugarverse

Cross-functional Web3 builder supporting product, content, community and launch execution.

## Planck Network

Contributed across builder-facing product work, technical storytelling and ecosystem launch support.

## Orvion Browser

Worked across product-facing build needs, narrative, creative assets and community activation.

## Robusinpe (Gaming)

Supported the gaming project as a builder across technical, content, launch and community touchpoints.

## HOW I BUILD

- 01 ARCHITECT** Shape product direction, system flow and Web3 architecture before implementation.
- 02 BUILD** Develop smart-contract and frontend layers, connect the product experience, test and deploy.
- 03 EXPLAIN** Turn technical ideas into clear threads, launch copy and ecosystem-facing content.
- 04 ACTIVATE** Host or support Spaces, community conversations and X/Telegram launch moments.
- 05 DESIGN** Create motion-led visuals and brand assets that make the product easier to understand and remember.

# BUILD RECORD

Technical range, hackathon momentum and the operating style behind the work.

HACKATHONS & RECOGNITION

JUN 2026

Colosseum

Hackathon build / ecosystem submission

MAY 2026

Hack4Freedom

Hackathon build

MAR 2026

Ranger's Build-A-Bear

Hackathon build

FEB 2026

Spark Hackathon #1

Hackathon build

3x

HACKATHON WINNER

Direct invitation from Superteam UK leadership to the Somerset House coworking space in London following the Colosseum submission.

EDUCATION

MATHEMATICS

Mathematics - advanced coursework spanning Differential Geometry, Real Analysis, Topology, Tensor Calculus, Number Theory and Mathematical Modeling.

TECHNICAL RANGE

PRODUCT & FRONTEND

Next.js, React, TypeScript, JavaScript, Node.js and Tailwind CSS for polished product-facing experiences.

SMART CONTRACTS

Solidity and Hardhat for EVM systems; Rust and Anchor for Solana development; experience across Sui / Walrus environments.

CHAIN ENVIRONMENTS

Solana / SVM, Sui / Move, Celo, GOAT Network and broader EVM-compatible ecosystems.

AI + DELIVERY

Web3 AI agent architecture, Cursor AI-assisted development, Git/GitHub workflows and Vercel deployment.

WHAT SETS THE WORK APART

END-TO-END EXECUTION

Move from architecture and smart-contract deployment through frontend, brand, motion and launch content without losing the product story.

CROSS-CHAIN RANGE

Build across EVM (including Celo), SVM/Solana and Move-based Sui environments rather than relying on one chain stack.

TECHNICAL STORYTELLING

Translate complex product mechanics into clear threads, community narratives and live Spaces conversations.

SYSTEMS THINKING

A mathematics-heavy foundation supports structured reasoning around protocol design, product logic and technical trade-offs.

BUILD IT. EXPLAIN IT. LAUNCH IT.

The edge is not doing five unrelated jobs. It is understanding one Web3 product deeply enough to build the system, shape the experience, tell the story and help the launch land.
